

# Why Buy Window Film

*"We were frustrated in our new home... we had amazing views out our large bay windows. But with the direct afternoon sun, we couldn't see out. It was just too bright. Not anymore. Window film saved the day...and the view."*

*"As an interior designer, I need to balance quality and cost. Window Film protects my client's furniture and drapes from sun damage and fading. I always recommend window film."*

*"My air conditioning bill was out of control. Adding window film to reduce the heat made the room comfortable...saving me money."*

# Sunblock for your Furnishings

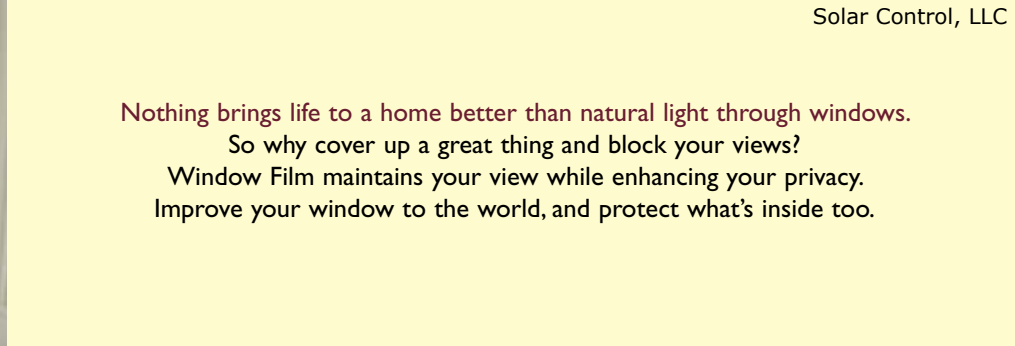

## 3M Window Film

Everyone knows that the sun can damage your skin, but few people realize what it does to your sofa, draperies, carpet, chairs, artwork, and more. Everything you value in your home will look better and last longer when you block out the sun's harmful rays with window film.

- Reduce Fading
- Control Heat
- Minimize Glare
- Increase Safety

BEFORE

AFTER

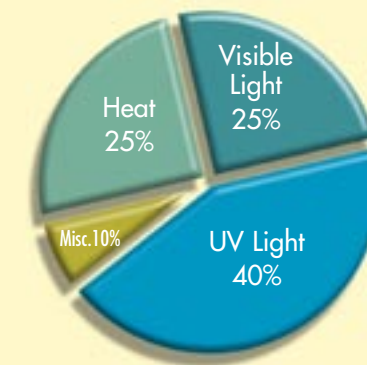

Nothing brings life to a home better than natural light through windows. So why cover up a great thing and block your views? Window Film maintains your view while enhancing your privacy. Improve your window to the world, and protect what's inside too.

# Free Consultation

Our window film experts have a variety of film choices to suit your home. Once treated, you'll notice better views and lower utility bills. Where you have a window, our design consultant has a solution. We'll come to you and help you decide which film is best for you. Our professional installation saves you time, money, and hassle.

## Causes of Fading

# Natural Light... Only Better

## Keep Your Cool

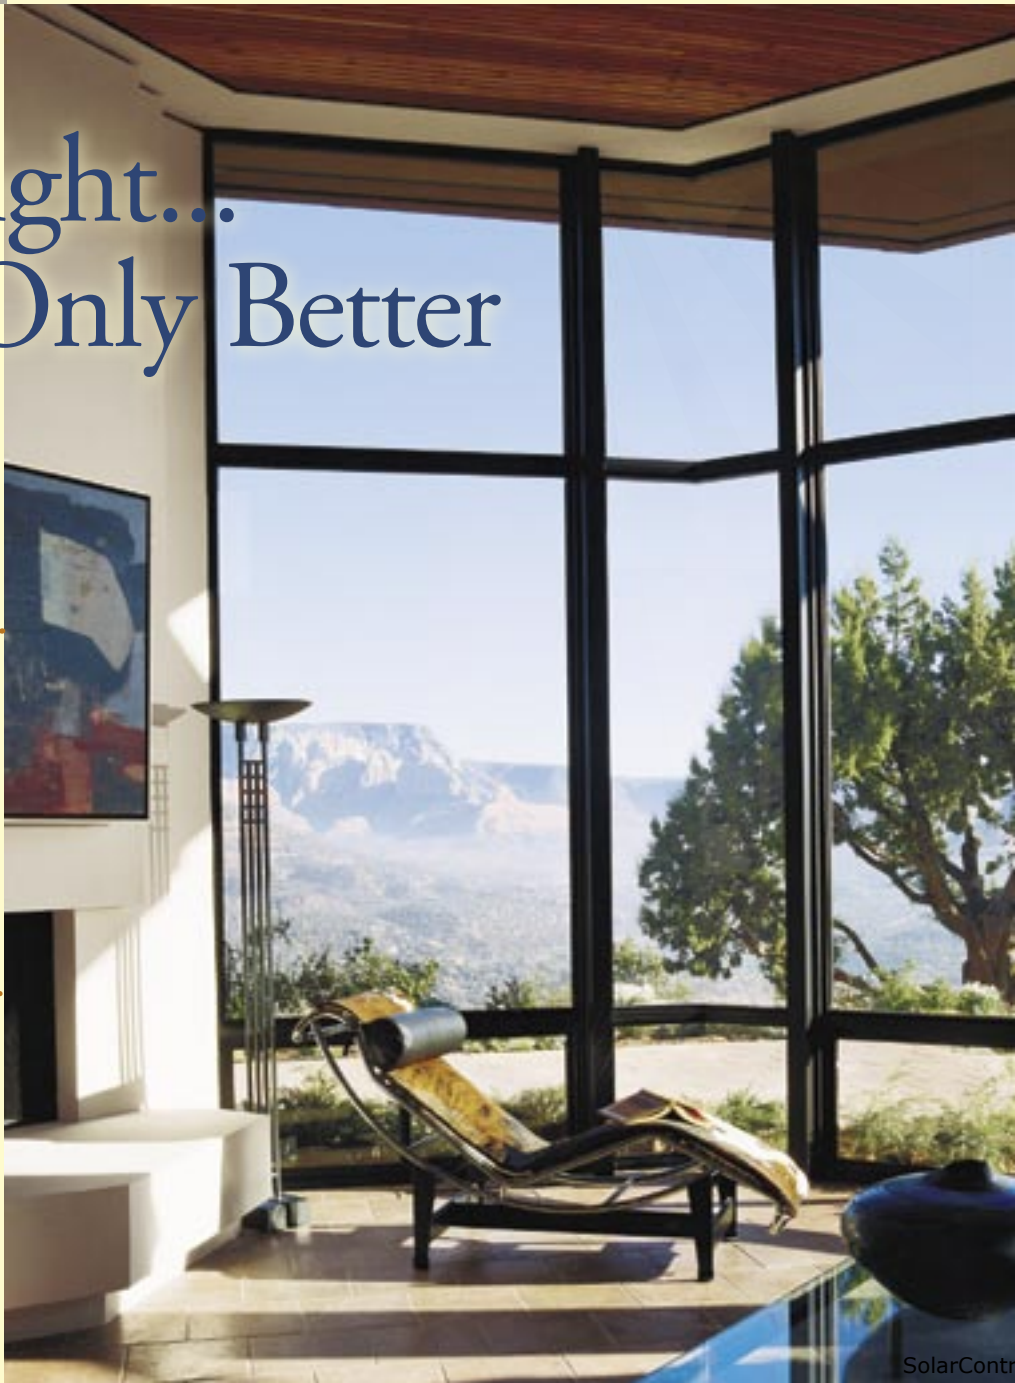

No doubt about it, sunlight heats up a house. Especially in the summer. Now you can increase your comfort level without turning up the A/C. Window Film reflects away up to 78% of the heat that comes through your windows. This means that it costs you less to keep your home cool. A lot less. And when the utility bills are lower, you're cooler too.

## Freedom from Fading

It's proven that the UV rays inside your home are doing just as much damage to your belongings as UV rays outside. And too much sun exposure makes most things look older faster. Window Film blocks out 99% of the sun's harmful UV rays so your furniture, rugs, artwork, chairs, drapes, and wallpaper will look better and last longer.

## Easy on the Eyes

Working on a computer or watching TV in a sunny room can be annoying, and in some cases, harmful to the eyes. With Window Film, you don't need to close shades or drapes to reduce the eyestrain. Window Film reduces glare by 93%, so that you can enjoy your TV or computer monitor in comfort.

## Warranty

Our film's lifetime warranty guarantees that windows treated with window film will never bubble, peel or turn purple. All films are backed by an impressive warranty from nationally respected manufacturers like 3M and CPFilms.

## Personal Safety

Windows treated with Window Film are safer than untreated windows because they reduce the hazard of flying glass. In the event of severe weather, an accident, or even a criminal break-in attempt, the window film acts as an added barrier, increasing safety and security.
