

PanelVision
Silent Gliss 2600

Fold the panel...

And DESIGN the view.

Silent Gliss' revolutionary PanelVision system allows designers to extend their creativity all the way through the window.

By combining textiles and this unique folding panel geometry, you can venture beyond treating the window.

Explore the possibilities with PanelVision.

Creativity

Four Dramatic Forms

Neatly stacked to form a column of color.

Fully folded panels form widely spaced vertical elements enhancing the interior and framing the view.

Partially folded, the panels subdue the natural light and hint at the view beyond.

Completely unfolded panels transform into an elegant wall of translucent color.

Form and Function folded into one dramatic design element.

(Please note that the folding sequence shown from bottom to top represents the actual product operating sequence).

Versatility

PanelVision systems fabricated with up to eight panels can be configured with center, off-center, and one way draws as necessary to frame your view.

A myriad of fabrication details are possible. Please forward your design concept to us to review for technical suitability.

PanelVision systems can be curved into large radius segments to form truly unique room dividers and enhance modern curvilinear window walls.

Manually operate your PanelVision system using Silent Gliss' unique mono-control drive mechanism providing complete folding and traversing via a single loop bead chain or a crank handle.

Motorize your PanelVision system for the ultimate in designed control. From a simple wall switch to fully integrated automation systems, Silent Gliss control solutions enhance your design.

Silent Gliss must review and approve your textile selection prior to fabrication. Please see our website for a listing of pre-approved textiles and information for submitting textile samples for approval.

Panels are attached to Silent Gliss' patented rotation and drive mechanism via Velcro to facilitate simplified panel fabrication and seasonal changing of panels.

Please consult with Silent Gliss USA's Technical Support staff for complete technical installation details, measuring information and system limitations.
